

NEW!
Thermoplastic Multi-Port Selector Valve

Standard Features:

- 100% individually tested
- Corrosion resistant - no wetted metals either internal or external
- Self-lubricating machined PTFE rotor assures smooth operation and eliminates need for lubrication
- Compact size
- Fully customized for unique multi-port requirements
- Electric and Pneumatic actuation available
- Stackable for manifold applications

Ideal For:

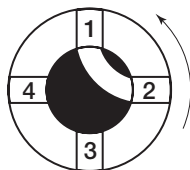

- Pilot and process sampling
- Chromatography
- Remote control and positioning
- Research and development
- Cleaning Systems

Materials of Construction:

Valve bodies are available in Grade 1, Type 1 PVC, CPVC, Beige Polypro, PVDF or PTFE. Shaft material matches body material. Self-lubrication rotor is PTFE; elastomer seals are FKM. Handle ABS. There are no wetted metals.

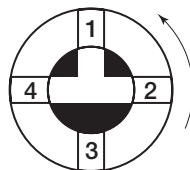

Design Considerations and Flow Configurations:

2-Way Drillings

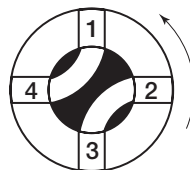

Handle Turn 90°

3-Way Drillings

Handle Turn 90°

4-Way Drillings

Handle Turn 90°

5-Way Drillings

Handle Turn 360°

Valve design uses a pre-drilled PTFE rotor to distribute flow to multiple ports.

The “wiping” action of the rotor can create momentary cross-contamination between ports.

The flow patterns depicted above are standard; valves are fully customizable and stackable to create multi-level valves and manifolds. With actuation packages, Selector Valves provide unlimited flexibility in developing multi-port control systems. Please contact our Technical Services group at 973-256-3000 to discuss your specific application.
